

SmartPlug

Brain food for your sensor: Adapted between the sensor and connection cable, the SmartPlug fulfils functions which would otherwise have to be programmed via a PLC. There is a choice of 4 basic versions which are programmed via external teach-in or you can opt for the new all-in-one MFU SmartPlug which is already programmed with all functions. You can then adjust them with a PDA and an interface converter (accessory SensoPart) using the integrated infrared interface.

- Suitable for sensors of all well-known manufacturers
- Suitable for M12 connections (also for M8 using adapter)
- All versions cascable, e.g. counter and timer combined
- For pulse stretching or as signal amplifier up to 400 mA
- Versions for manual or teach-in programming
- Maximum switching frequency 10KHz

Ø 20 mm x 60 mm
